County Population	5
County Profiles	7
Appendix	57
Other Drugs.....	57
Infectious Disease.....	69
Data Dictionary: Additional Notes.....	75
Top 5 Counties by Domain Indicator (Highest Risk)	
Domain Rankings by County	
Mean Indicator Values by Region	
Unique-Unduplicated Clients Served by Provider by Calendar Year	
Client Admissions by Provider by Calendar Year	

OVERVIEW

The purpose of this report is to provide a timely update on the latest data on substance use disorder indicators for county planners. Note that it is not intended to be a replacement for the work of the State Epidemiological Outcomes Workgroup. The present report is an effort to meet the recent requests of counties for data assistance in the development of their 2024-2025 county treatment plans. The report includes charts and tables for over 16 indicators of county risk factors associated with the development of substance use disorders; an additional nine supplemental indicators are provided at the end of the document. Through the assistance of our partner state agencies, we have included data indicators based on the research that are typically associated with substance use disorders. The framework for reporting these indicators is intended to provide a simple tool for planners to utilize to help make data-driven decisions in support of prevention and treatment planning activities. We recommend that the report be used in conjunction with other local knowledge resources to provide the best results.

ORGANIZATION OF THE REPORT

The first section of the report includes the county pages, each with its 2022 indicator ranks and percent change from the previous year's results. Indicators were organized into the following data domains:

- Alcohol
- Nicotine
- Opioids
- Social

Supplemental Data is located in the Appendix and includes information on Other Drugs and Infectious Diseases.

Ranks

The ranks were calculated based on the county rates or percentages reported and, for the most part, work in the order of high risk to lower risk for the development of substance use disorders. Therefore, a county with a rank of "1" represents the highest risk for an indicator.

Each indicator has a ranking, and the domain is calculated by summing the ranks and dividing by the number of indicators in the domain. The overall county rank is simply an average of the domain rankings. Note that, for some indicators, the rank is missing because the county rates were based on small sample sizes and therefore are not reliable. Missing indicators/ranks are also present when indicator counts were <5 and therefore suppressed. You will find a "*" mark in place of the value for these observations.

Appendix

Additional information on other drugs is included with the same ranking methodology. This section is not organized within another domain or a domain on its own, as it includes mortality information that is not exclusive to a single cause. This means that opioid data may be duplicated and more heavily weighted in relation to the other measures if included in final county ranking.

Infectious disease data is also included in the appendix, as there are increased risk factors for certain conditions with substance use, especially among people who inject drugs.

Interpretation

This report is for informational purposes only. There are a variety of measures to consider when analyzing substance use burden, and the chosen indicators are one of many options available. Readers are encouraged to use discretion when analyzing the report and to consider additional factors that may not be included, as well as regional context (including local reporting practices), when interpreting county ranks.

DATA SOURCES

Domain	Indicator	Source	Year
Alcohol	Binge Drinking Among Adults (%)	SC-DHEC	2018-2022
	Heavy Use of Alcohol Among Adults (%)	SC-DHEC	2018-2022
	DUI Crashes (Rate per 100,000 population)	PIRE	2022
	Alcohol-Related Hospitalizations (Rate per 10,000 population)	SC Revenue and Fiscal Affairs	2022
Nicotine	Cigarette Use Among Adults (%)	SC-DHEC	2018-2022
	Smokeless Tobacco Use Among Adults (%)	SC-DHEC	2018-2022
	Nicotine-Related Hospitalizations (Rate per 10,000 population)	SC Revenue and Fiscal Affairs	2022
Opioids	EMS Naloxone Administrations (Rate per 100,000 population)	SC-DHEC, JustPlainKillers.com	2022
	Opioid Prescriptions Dispensed (Rate per 100,000 population)	SC-DHEC, JustPlainKillers.com	2022
	Opioid-Involved Overdose Deaths (Rate per 100,000 population)	SC-DHEC, JustPlainKillers.com	2021
	Opioid-Related Hospitalizations (Rate per 10,000 population)	SC Revenue and Fiscal Affairs	2022
Social	Unemployment (%)	US Department of Labor	2022
	HS Graduation Rate (%)	SC Department of Education	2022
	Child Maltreatment Investigations (Rate per 10,000 population)	SC-DSS	2022
	DUI Arrests (Rate per 100,000 population)	SLED	2022
	Drug Law Violations (Rate per 100,000 population)	SLED	2022

Additional Indicators			
Other Drugs	Fentanyl Overdose Deaths (Rate per 100,000 population)	SC-DHEC	2021
	Prescription Overdose Deaths (Rate per 100,000 population)	SC-DHEC	2021
	Total Drug Overdose Deaths (Rate per 100,000 population)	SC-DHEC	2021
	Psychostimulants with Abuse Potential Deaths (Rate per 100,000 population)	SC-DHEC	2021
	Cocaine-Related Deaths (Rate per 100,000 population)	SC-DHEC	2021
Infectious Diseases	Syphilis Incidence (Rate per 100,000 population)	SC-DHEC	2022
	Chlamydia Incidence (Rate per 100,000 population)	SC-DHEC	2021
	Gonorrhea Incidence (Rate per 100,000 population)	SC-DHEC	2022
	HIV Incidence (Rate per 100,000 population)	SC-DHEC	2022

* Percentage is based on county authority value and will be same for each county under the authority’s purview.

**Mortality rates included utilize provisional data.

NOTE: The domain “Other Drugs” is based on the 2021 SC-DHEC data. SC-DHEC is currently in the process of compiling the 2022 data. The 2022 Drug Overdose report (when available) can be accessed at <https://scdhec.gov/health/biostatistics-publications> The Overall County Rank does not include the Other Drugs domain.

COUNTY POPULATION

York	282,108	284,032	289,255	294,248

Note: The estimates are developed from a base that incorporates the 2020 Census, Vintage 2020 estimates, and 2020 Demographic Analysis estimates. The estimates add births to, subtract deaths from, and add net migration to the April 1, 2020, estimates base. For population estimates methodology statements, see <https://www.census.gov/programs-surveys/popest/technical-documentation/methodology.html>. See Geographic Terms and Definitions at <https://www.census.gov/programs-surveys/popest/guidance-geographies/terms-and-definitions.html> for a list of the states that are included in each region. All geographic boundaries for the 2022 population estimates series are as of January 1, 2022.

Total Fatal Prescription Drug Overdoses (Count)

Prescription drugs, opioid and non-opioid, are identified by the following ICD-10 codes: T36.0--T39.9, T40.2-- T40.4, T41.0--T43.5 and T43.7--T50.8.

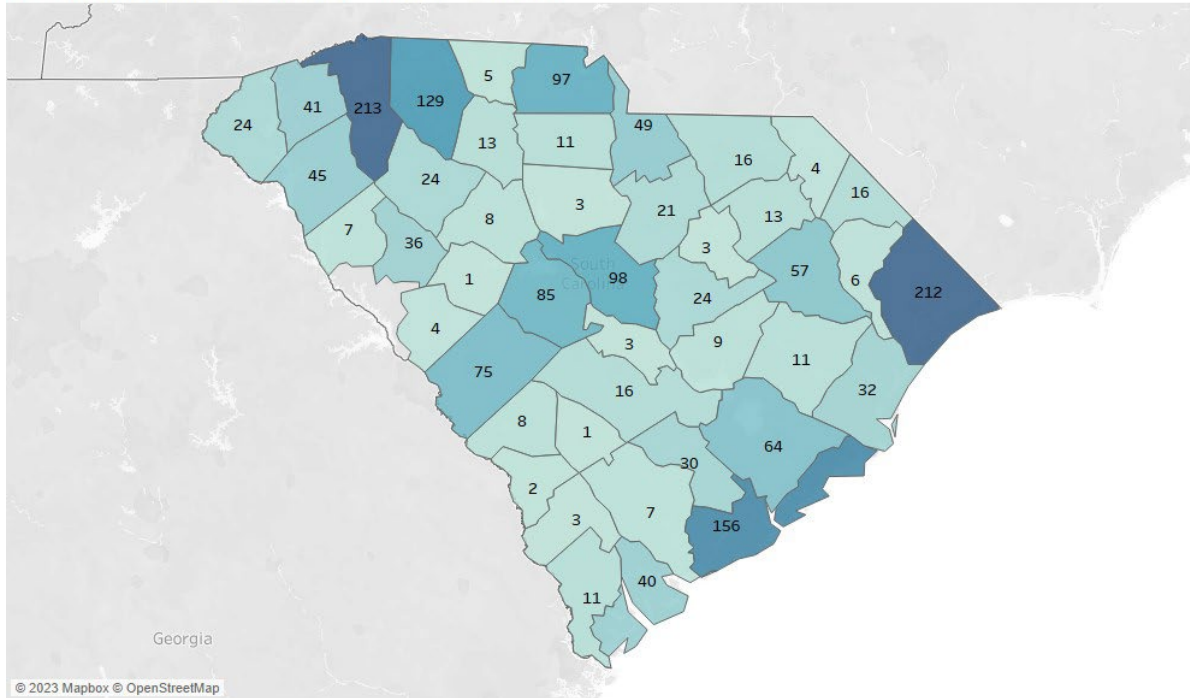

Total Fatal Prescription Drug Overdoses (Rate per 100,000)

Prescription drugs, opioid and non-opioid, are identified by the following ICD-10 codes: T36.0--T39.9, T40.2-- T40.4, T41.0--T43.5 and T43.7--T50.8.

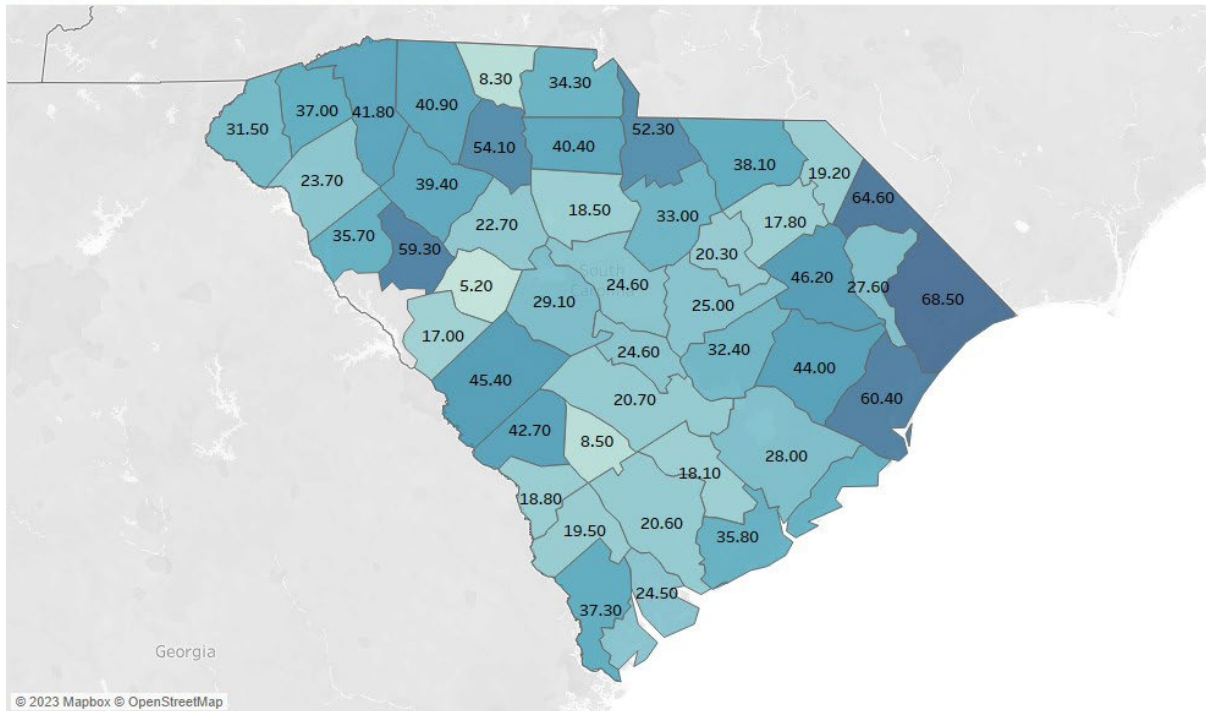

Total Opioid-involved Fatal Overdoses (Count)

Opioids, both legal and illegal, are identified by codes T40.0--T40.4, T40.6.

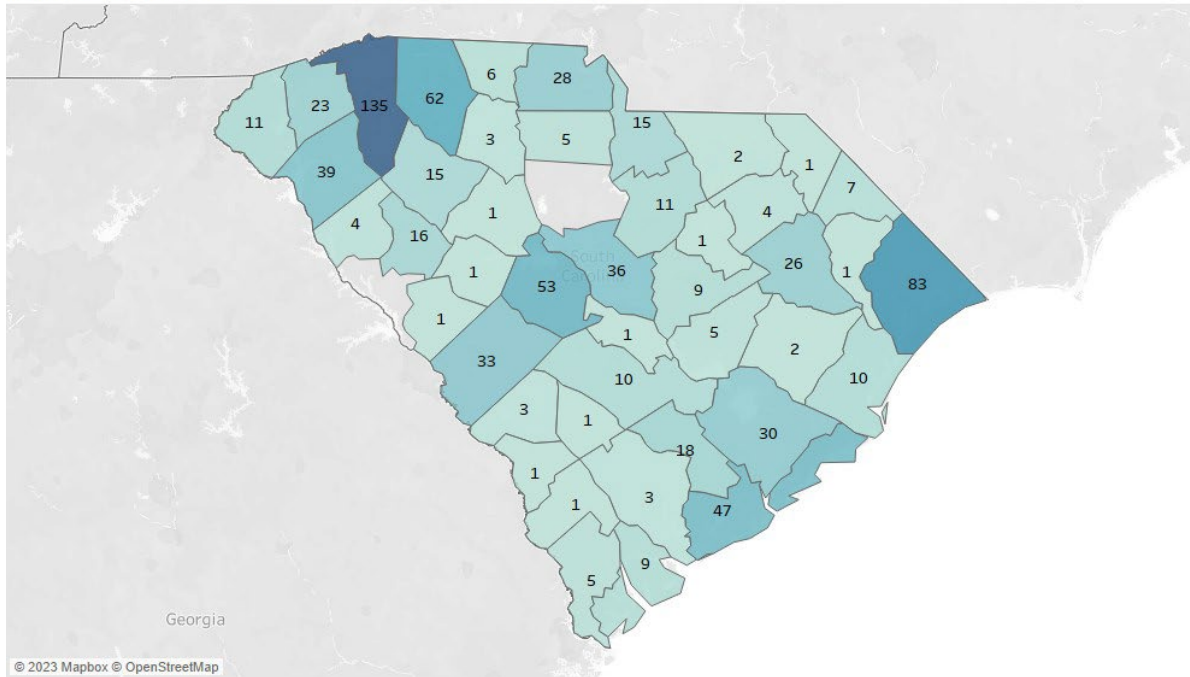

Total Opioid-involved Fatal Overdoses (Rate per 100,000)

Opioids, both legal and illegal, are identified by codes T40.0--T40.4, T40.6.

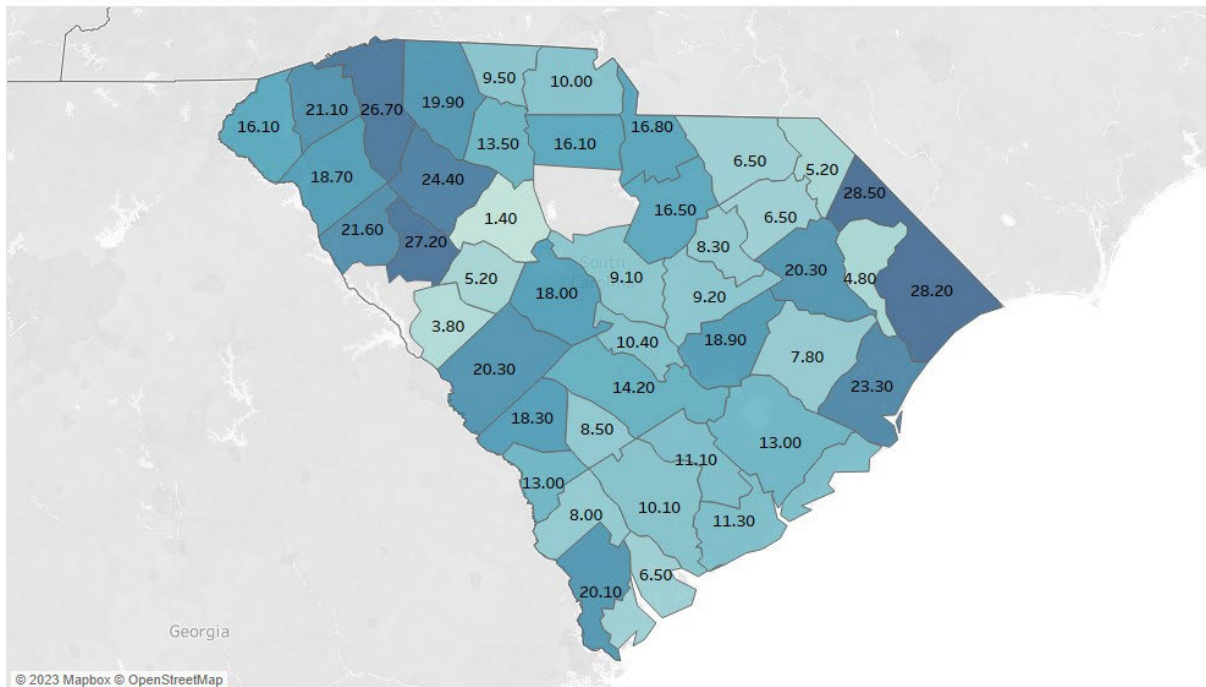

Overdose Deaths identified with Psychostimulants with Abuse Potential (Count)

Psychostimulants with abuse potential, which include such drugs as methamphetamine, amphetamine, methylphenidate (Ritalin), and 3,4-methylenedioxy-methamphetamine (MDMA, Ecstasy) are identified by the code T43.6.

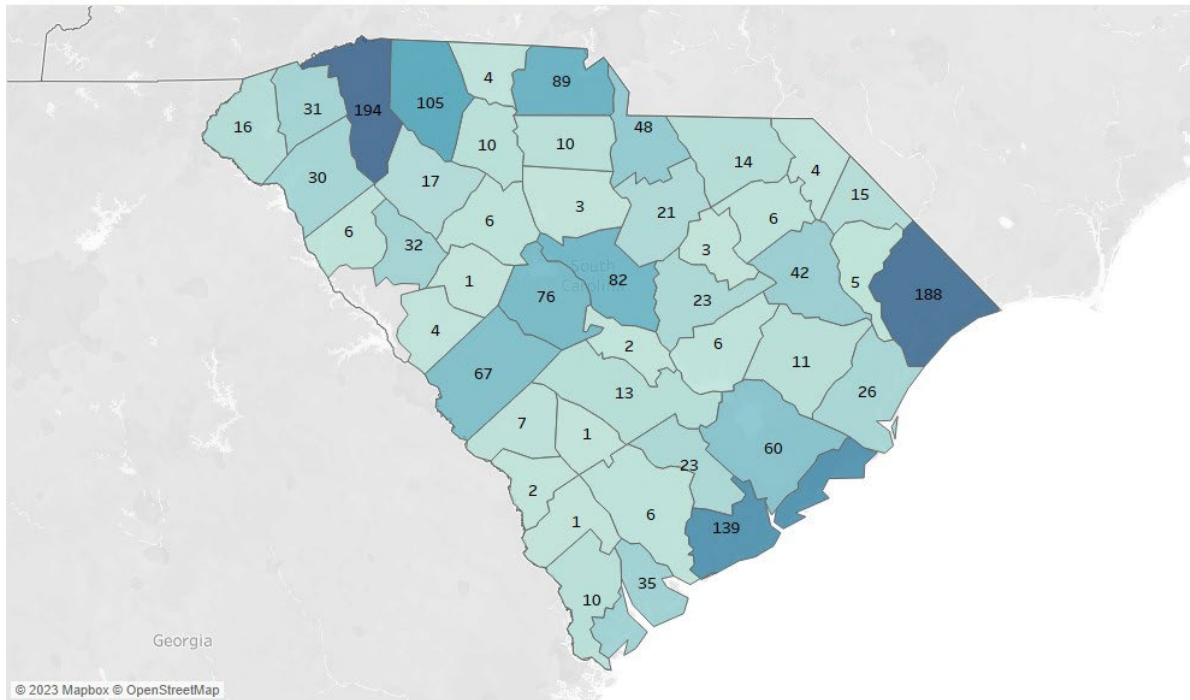

Overdose Deaths identified with Psychostimulants with Abuse Potential (Rate per 100,000)

Psychostimulants with abuse potential, which include such drugs as methamphetamine, amphetamine, methylphenidate (Ritalin), and 3,4-methylenedioxy-methamphetamine (MDMA, Ecstasy) are identified by the code T43.6.

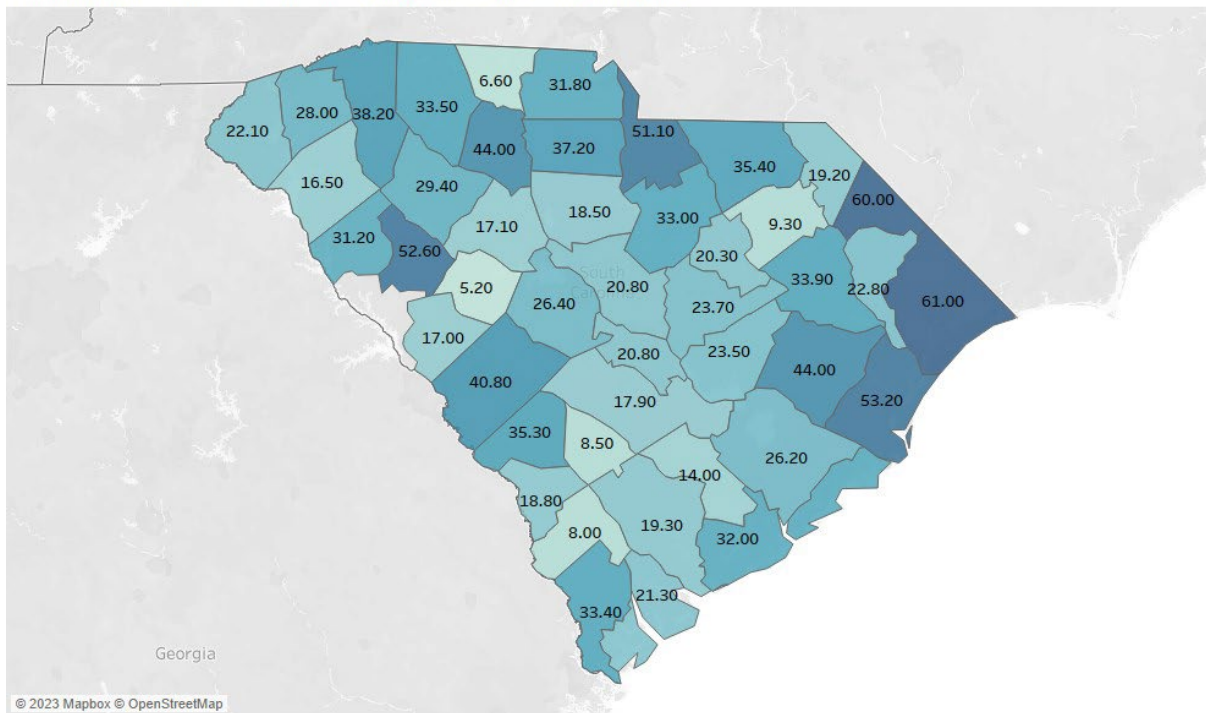

Total Fentanyl-involved Fatal Overdoses (Count)

Fentanyl is a synthetic opioid and is identified through a search of the literal cause of death

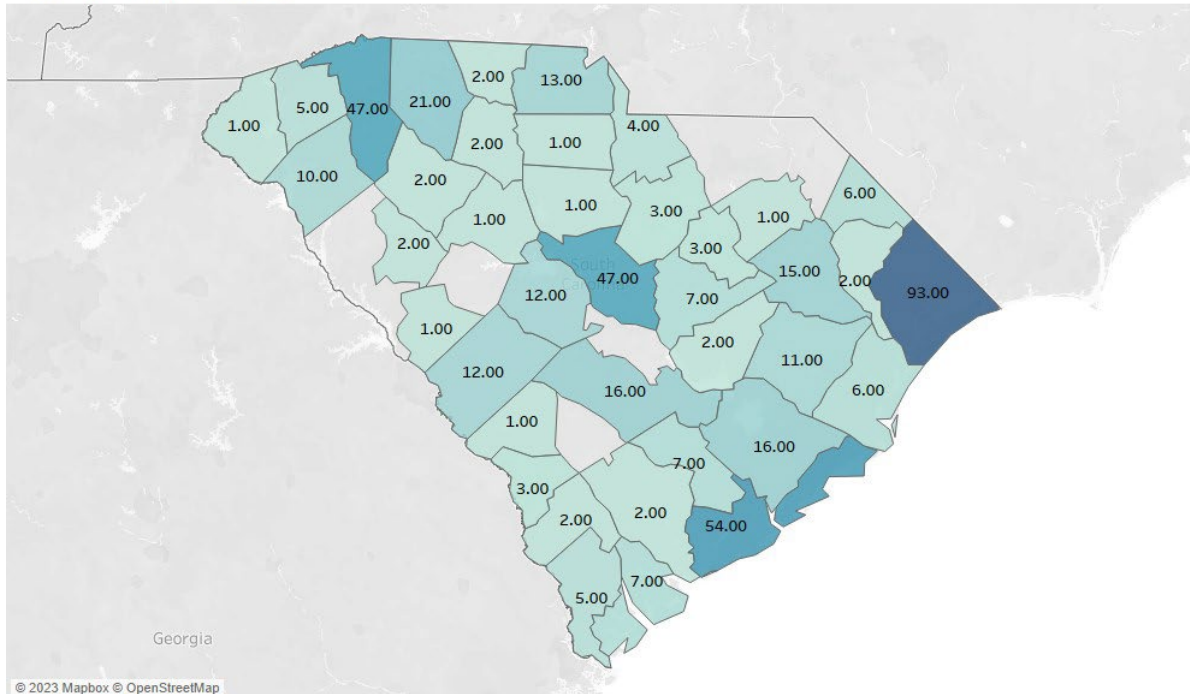

Total Fentanyl-involved Fatal Overdoses (Rate per 100,000)

Fentanyl is a synthetic opioid and is identified through a search of the literal cause of death

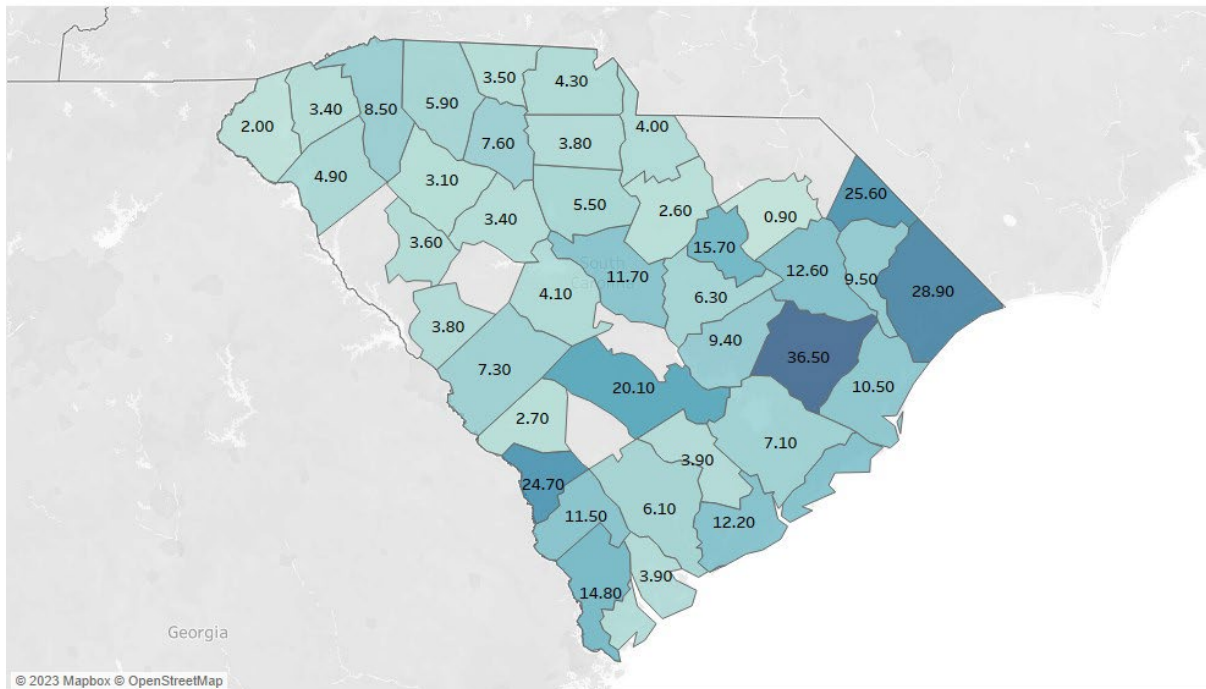

Overdose Deaths identified with Cocaine (Count)

Cocaine is identified by the code T40.5

Overdose Deaths identified with Cocaine (Rate per 100,000)

Cocaine is identified by the code T40.5

Appendix: Data Dictionary – Additional Notes

Population Reference

The 2022 population figure reflects an estimate based on the 2020 decennial census conducted by the U.S. Census Bureau. This agency describes the methodology of estimation by taking the base population (2020 census) and crafting an estimate through available birth, mortality, and migration data.

Use of a different estimate, including a different census year, will impact rate calculation. This may address the difference in rate calculations in this report compared to other sources.

Mortality

Fatal Drug Overdose data is provisional data and describes fatal drug overdose deaths that occurred in South Carolina in 2021. Upon its publication, see DHEC's final Vital Statistics report for the most up-to-date rates for South Carolina.

Drug overdose deaths are identified using underlying cause-of-death codes from the 10th revision of the International Classification of Diseases (ICD-10): X40–X44 (unintentional), X60–X64 (suicide), X85 (homicide), and Y10–Y14 (undetermined). Drug overdose deaths involving selected drug categories are identified by additional multiple cause-of-death codes. The current “prescription drugs” category includes both opioid and non-opioid prescription drugs. The category “opioids” includes both legal and illegal opioids. Prescription drugs are identified by the following ICD-10 codes: T36.0–T39.9, T40.2–T40.4, T41.0–T43.5 and T43.7–T50.8. Opioids are identified by codes T40.0–T40.4, T40.6. Other codes used are: heroin T40.1, methadone T40.3, cocaine T40.5. Fentanyl is identified through a search of the literal cause of death. Psychostimulants with abuse potential, which include such drugs as methamphetamine, amphetamine, methylphenidate (Ritalin), and 3,4-methylenedioxy-methamphetamine (MDMA, Ecstasy) are identified by the code T43.6.

Drug overdose deaths may involve multiple drugs; therefore, a single death might be included in more than one category when describing the number of drug overdose deaths involving a specific drug. For example, a death that involved both heroin and fentanyl would be included in the following categories: deaths involving heroin, deaths involving fentanyl, deaths involving opioids, and deaths involving prescription drugs.
